

EMIRHAN

Darkenola | Software Developer

Software developer focused on backend systems, automation, modern frontend engineering, and project-led growth through real builds. I enjoy turning ideas into practical software with strong structure, polished interfaces, and maintainable implementation detail.

CORE FOCUS

- Backend workflows, service logic, data flow, and system reliability.
- Automation-oriented tooling that reduces repeated work and sharpens operational clarity.
- Responsive interfaces with strong hierarchy, clean spacing, and premium presentation.
- Continuous learning through documentation, iteration, refactoring, and real project delivery.

SELECTED PROJECTS

Darkenola Portfolio

Next.js, TypeScript, Tailwind CSS, Framer Motion

A premium personal brand portfolio built with App Router, localized EN/TR routing, structured case studies, polished motion, and a refined dark visual system.

FocusFlow Productivity

Next.js, Node.js, JavaScript

A productivity-focused workspace concept designed around daily planning, attention management, and cleaner task execution with a serious product feel.

Automation Control Dashboard

Node.js, JavaScript, GitHub, Linux

A dashboard concept for monitoring automation jobs, workflow health, and system-level signals with an emphasis on visibility and operational flow.

TECHNOLOGY

Languages: Python, Java, C, C++, C#, JavaScript

Backend / Runtime: Node.js

Frontend: HTML5, CSS3, Next.js

Tools: Git, GitHub, Linux, VS Code

DEVELOPMENT APPROACH

- Build around real use cases, not decorative demos.
- Prefer maintainable structure, readable code, and clear technical tradeoffs.
- Use iteration to improve both product quality and engineering discipline.
